Malignant epidermoid arising from the third ventricle: A case report

Samadhan Pawar, Chaitanya Borde, Atul Patil, Rajnish Nagarkar

Abstract

BACKGROUND

Third epidermoid tumors are a rare finding. The appearance of these tumors often makes them difficult to diagnose, and thus they require multimodality imaging.

Schwannoma of the third ventricle – a case report

www.ncbi.nlm.nih.gov › ... › [Asian J Neurosurg](#) › v.5(1); Jan-Jun 2010

Introduction. Majority of these **tumours** were benign but two had **malignant** features [4]. We describe a **case report** of a patient with a schwannoma of the **anterior** part of the **third ventricle** which was mimicking a **colloid cyst**.

Primary Intracranial Squamous Cell Carcinoma Arising De ...

<https://www.sciencedirect.com/science/article/pii/S1878875018318503>

This is the first **report** of squamous cell carcinoma in the lateral **ventricle arising** de novo. • A review of SCC **malignant** transformation of **epidermoid** cysts and SCC **arising** de novo is presented.

Author: Xiaochao Liu, Zhongping Chen, Yuton... **Publish Year:** 2018

Early Recurrence of an Intracranial Epidermoid Cyst Due to ...

www.ncbi.nlm.nih.gov › ... › [Skull Base](#) › v.16(2); 20

CASE REPORT. A magnetic resonance (MR) scan anterior and to the right of the brain stem, causing the **fourth ventricle**. The lesion extended through the part of the **third ventricle**.

https://www.researchgate.net/publication/11956664_Squamous_Cell...

The authors **report** the **case** of a 67-year-old woman with primary micro-invasive squamous cell **carcinoma** located in the **lateral ventricle** and originating from an **epidermoid** cyst.

[Early Recurrence of an Intracranial Epidermoid Cyst Due to ...](#)

[www.ncbi.nlm.nih.gov](#) > ... > [Skull Base](#) > v.16(2); 2006 May

Intracranial **epidermoid** cysts are slow-growing lesions, which may recur after incomplete resection, but do so over many years. The authors present the **case** of an **epidermoid** that repeatedly recurred over a short period, which was discovered to be secondary to a low-grade bacterial infection.
