Evaluating learning and change in orthopaedics: What is the evidence-base?

Valsamis EM *et al.* Evaluating learning and change in orthopaedics

Epaminondas Markos Valsamis, Mohamed Sukeik

Abstract

Learning and change are key elements of clinical governance and are responsible for the progression of our specialty. Although orthopaedics has been slow to embrace quality improvement, recent years have seen global developments in surgical education, quality improvement and patient outcomes research. This review covers recent advances in the evaluation of learning and change and identifies the most important research questions that remain unanswered. Research into proxies of learning is improving but more work is required to identify the best proxy for a given

Introduction

The Rationale For Evidence-Bas...

Discussion of Steps to Practicir

Physicians are under pressure, increasingly, to provide quality healthcare in the most cost-effective way possible. The high costs of medical care, in terms of both morbidity and money, are driving the need to base clinical decision making on standardized guidelines that can help physicians provide the best care to all patients at the lowest cost to the individual and to society. Evidence-based medicine (EBM) is the term used to describe the approach to clinical decision making that is bas...

Evidence-Based Medicine in Orthopaedic Surgery - A Way to the Future. If patients prove that a hip replacement is better than medication and a cane, it is possible to justify expense and physical risks of surgery and the possible need for expensive revision surgery. If patients do not prove that a hip replacement is better than pills and a cane,...
