jpatholm.org/journal/rss/xml/feed.xml

Hepatocellular adenoma (HCA) is the most common type of benign **liver tumor**, and its major complication is **malignant** transformation to **hepatocellular carcinoma** (HCC). Here, we report a case of HCC arising in HCA with **bone marrow metaplasia** in a 24-year-old Korean woman who presented with abdominal discomfort.

Inflammatory Pseudotumor (Myoblastic Tumor) of the ...

<https://www.ajronline.org/doi/full/10.2214/AJR.07.3663>

Inflammatory pseudotumor is a chronic inflammatory tumefaction of unknown origin. Because the term "inflammatory pseudotumor" is nonspecific and the lesions have a variety of histologic presentations, several alternative names have been used: inflammatory **myofibroblastic** tumor, plasma cell granuloma or pseudotumor, xanthomatous pseudo tumor, **pseudosarcomatous myofibroblastic pro liferation** ...

Inflammatory myofibroblastic tumour - ScienceDirect

<https://www.sciencedirect.com/science/article/pii/S0740257016300661>

While initially controversial, the proposal that a subset of inflammatory pseudotumours were **myofibroblastic** neoplasms is now acknowledged. Inflammatory **myofibroblastic** tumour is a spindle cell neoplasm of intermediate biological potential that may arise in a wide range of anatomic sites but has a particular propensity for the lung and abdominal soft tissues.
