SPECIFIC COMMENTS TO AUTHORS

The authors undertook a review concerning the "Current Status of Adjuvant Chemotherapy for Gastric Cancer". They should be congratulated for this high quality review. The manuscript is well-written with adequate reference to the current medical literature in the field. The content of the text is satisfactory enough and the table is

SPECIFIC COMMENTS TO AUTHORS

In this manuscript the authors have analyzed the current status of adjuvant chemotherapy for gastric cancer. The question is very interesting and the study contains valuable information. Major points 1. The English style is poor and the text contains

https://www.wjgnet.com

many grammatical errors. It is mandatory the text to be corrected by a native English-speaking person. 2. A brief description of available pharmacological alternatives is required before commenting their use in different regimens. 3. The author should include and comment the recent review on mechanisms of chemoresistance in gastric cancer PMID 26234359. 4. Some abbreviations are defined in table 1 legend, but they must be also defined at their first appearance in the text.

Response to reviewer's comments:

1. Although I edited this manuscript using native English editing service in my country before submission, I edited again for revised manuscript using "Filipodia Publishing" that is recommended by BPG, for better quality of English in this manuscript.
2. Thank you for your advice. I added the paragraphs about strategies, regimens, and pharmacological alternatives before comparing between guidelines, for better

understanding. (page 6)

3. I added the paragraphs about chemoresistance (page 9). However, I think that detailed summary about molecular and pharmacologic aspects of chemoresistance is not matched to concept of this review, because this review is about the adjuvant chemotherapy of gastric cancer in clinical field (not a systemic chemotherapy for advanced/metastatic cancer). Therefore, I am sorry that I mentioned this topic only briefly. Again, thank you for giving me a good advice and information for the reference.
4. I revised the manuscript to define abbreviations at their first appearance in the text, including titles of guidelines, main text, and Table 1. Thank you.

SPECIFIC COMMENTS TO AUTHORS

The methodology of the study has not been highlighted in a standardized way. I would suggest a better description, hence writing a methodology. In conclusion, this article by n-Hwan et al. covers an interesting topic. The study did a comprehensive summary on the adjuvant therapy in patients with advanced gastric cancer. However, there was no

https://www.wjgnet.com

added value on this topic. N-Hwan et al. only compared between three oncologic protocols. Moreover the results in western adjuvant therapy can not be directly compared to the Asian findings because on the preceded surgical approach Therefore I would suggest minor revision of the study.

Response to reviewer's comments:

1. Thank you for your advice. I understand that methodology is needed for more objective conclusion of this review. However, in present situation, strategy for adjuvant chemotherapy of gastric cancer is used as too various ways according to countries. Therefore, I could not design systematic review or meta-analysis with well-defined methodology.
2. I totally agree with your opinion that Western and Asian findings about chemotherapy for gastric cancer can not be directly compared. Unfortunately, I could

https://www.wjgnet.com

not suggest any statistical results about proper strategy for this issue. So, I mentioned this limitations in “conclusion” section (page 10).

3. Thank you for concerning about this review. I agree that simple review about various guidelines can not help adding value in objective way. But, I hope you agree that this kind of issue about understanding each other (European, US, ASIA) is still important for young researchers to perform further studies about adjuvant chemotherapy for gastric cancer. Thank you very much.
