SPECIFIC COMMENTS TO AUTHORS

This is an interesting study about the application of self-care based on full-course individualized health education and its influencing factors in patients with chronic heart failure. In this study, the authors enrolled chronic heart failure patients and divided

them into an intervention group and control group using a random number table. The self-care behavior, 6-min walking distance, and 36-Item Short Form Health Survey scores were compared between the two groups. The influencing factors of the self-care were also analyzed. As shown by logistic regression analysis, the influencing factors of self-care mainly included age, cardiac function class, and education background. The manuscript is well designed, and the results are very interesting. Tables are very clear. I have no special comments, only some minor language polishing should be corrected.

SPECIFIC COMMENTS TO AUTHORS

Interesting study. Some minor language polishing have to be revised. The inclusion criteria is clear, is there an exclusion criteria? Table 1 should be edited. The last column can't be read. No other comments.
