SPECIFIC COMMENTS TO AUTHORS

In addition to symptoms such as stool changes and abdominal pain, IBD patients may also experience a range of extraintestinal symptoms which include bone alterations. This review aims to summarize the epidemiology and pathophysiology of metabolic bone alterations in IBD subjects outlining the main risk factors for bone fragility. And it also

high light the role of the screening and prophylaxis for bone alterations in IBD patients and the importance of appropriately treating MBD, which has an important clinical significance. While there are still something that should be modified: First, it will be better to draw a schematic diagram to display the molecular pathway in the pathophysiology of bone alteration in IBD. Second, some parts of the review are somewhat redundant. For example, some parts of the diagnosis of osteoporosis and pharmacological management of OP are not relate with the IBD. Above all, this is an interesting review that is informative and has important clinical implications for patients with IBD with bone alterations.

SPECIFIC COMMENTS TO AUTHORS

It is a useful article to describe changes in bone metabolism in IBD. The article has been longer than necessary and should be shortened.
