

Reviewer: It is a narrative review conducted for the evaluating the use of absorbable mesh in laparoscopic paraesophageal hernia repair. The review is interesting but it lack the integration and need some modernization by adding figures, tables, methodology (databases searched) to be more systemically organized. In addition, English language editing is mandatory.

Answer: we have added 4 tables in order to be more systemically organized. We also added our methodology of research. English language editing was performed by Filipodia, reaching grade A certificate.

Reviewer: Title: Apt. Abstract: satisfactory. Introduction: Good Discussion: Needs adequate correlation. Tables summarizing the various studies and their results would have been better and added to the quality of the article. Conclusion: Adequate

Answer: Thanks for your comments.
