Stage-dependant management of septic arthritis of the ...

www.ncbi.nlm.nih.gov > ... > [Int Orthop](#) > v.33(4); 2009 Aug

This study is one of the larger surveys analysing the diagnostic and therapeutic treatment of septic arthritis of the shoulder. We report a series of 43 patients enrolled between 2001 and 2006. The mean age was 66 ± 12 years and comorbidities were present in 88% of patients.

Septic arthritis of the native shoulder is an uncommon orthopaedic infection, yet prompt diagnosis and treatment is essential for prevention of potential long-term morbidity. The glenohumeral (GH), acromioclavicular (AC), and sternoclavicular (SC) joints are all subject to septic arthritis and each must be treated quickly to preserve the function of the shoulder girdle and prevent spread of infection. Furthermore, the joints of the shoulder girdle are sometimes subject to atypical bacterial i...

Advanced septic arthritis of the shoulder treated by a two-stage arthroplasty

Goetti P *et al.* Shoulder arthroplasty in septic arthritis

Abstract

BACKGROUND

The usual treatment of septic shoulder arthritis consists of arthroscopic or open lavage and debridement. However, in patients with advanced osteoarthritic changes and/or massive rotator cuff tendon tears, infection eradication can be challenging to

Two-stage arthroplasty using functional temporary ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4674500>

May 28, 2014 · **Pyogenic arthritis and sepsis** in an **arthritic joint** can pose difficult management problems since the risk of infection after total **hip arthroplasty** is very high. Treatment modalities for patients with end-stage septic arthritis include: **debridement and fusion**, **resection arthroplasty**, and reconstruction with a total **joint arthroplasty** after resolution of the infection in a two-stage procedure.
