gastroplasty, aspiration therapies, SBEBT, among others. The authors conclude that the future of bariatric medicine should include endoscopic intervention as a major tool in its armamentarium. This is a timely review on a hot topic. The summary Table 1, with main findings, advantages and potential harms, is helpful. A careful description of search strategy can help the readers to locate the cited references. In addition, an assessment of the quality of available evidence for each technique is highly welcome. Finally, the comparative interpretation of the authors over the existing bariatric surgery can place this review as an authoritative review.
