## A case of rapidly progressive IgA nephropathy in a patient ...

<https://bmcnephrol.biomedcentral.com/articles/10.1186/1471-2369-13-84> ▼Aug 06, 2012 · **IgA nephropathy** has been reported as a renal involvement in Crohn's disease.

Crescentic **IgA nephropathy**, which accounts for fewer than 5% of cases of **IgA nephropathy**, has a poorer prognosis than other forms of crescentic glomerulonephritis. We recently experienced a case of rapidly progressive **IgA nephropathy** concurrent with exacerbation of Crohn's disease.

The present case is similar to those discussed, except for mesangial and segmental endocapillary proliferation secondary to monoclonal **IgA**  $\lambda$  light **chain** deposition. Glomerulonephritis associated with **IgA** deposits is characteristic of **IgA nephropathy** and Henoch-Schönlein purpura. 18 x 18 van Es, L.A. Pathogenesis of **IgA nephropathy**. Kidney Int.

#### Abstract

##### BACKGROUND

Monoclonal immunoglobulin can cause renal damage with a wide spectrum of pathological changes and clinical manifestations, without hematological evidence of malignancy. These disorders can be missed, especially when combined with other kidney diseases.

##### CASE SUMMARY

A 61-year-old woman presented with moderate proteinuria with normal renal function. She was diagnosed with IgA nephropathy combined with monoclonal gammopathy of undetermined significance after the first renal biopsy. Although having received immunosuppressive treatment for 3 years, the patient developed nephrotic syndrome. Repeated renal biopsy and laser microdissection/mass spectrometry analysis confirmed heavy chain amyloidosis. After nine cycles of bortezomib, cyclophosphamide and dexamethasone, she achieved very good partial hematological response and kidney response.
