SPECIFIC COMMENTS TO AUTHORS

This is a correct study but the degree of novelty seems reduced; a controlled study at the beginning would have been more convincing; the results were those to be expected from the beginning of the study,

SPECIFIC COMMENTS TO AUTHORS

This is a good study on HCV GT4 infection in children with hematological malignancies. As the fibroscan cut off was 12.5 kp, all the study patients were non-cirrhotic. So I think the title should be changed to non-cirrhotic HCV GT-4 infected patients.

SPECIFIC COMMENTS TO AUTHORS

This clinical prospective study was testing the effects of dual sofosbuvir/daclatasvir (SOF/DCV) therapy in the treatment of chronic HCV in survivors of hematologic malignancy in pediatric age group. As we all know, dual sofosbuvir/daclatasvir are

effective drugs for the treatment of HCV. In this study, the authors used dual sofosbuvir/daclatasvir to treat a particular population and achieved satisfactory results. One of the biggest shortcomings of this study maybe the small number of research crowd and the short duration of follow-up. In addition, introduction to the overall efficacy of dual sofosbuvir/daclatasvir in the treatment of HCV at this stage was not observed in this manuscript, and it is recommended to supplement the discussion if necessary. The research crowd is all infected with HCV genotype-4, is it still effective in the treatment of other HCV genotypes?

SPECIFIC COMMENTS TO AUTHORS

Discuss the reasons that patients with probable cirrhosis (FibroScan .12.5, APRI > 2, etc.) were excluded from the study since they had the most to benefit
