SPECIFIC COMMENTS TO AUTHORS

This is an excellent review of colonic motility, defecation, and the use of colonic manometry to diagnose problems with motility and to ascertain if the pathological colon is potentially amenable to treatment. I have no significant criticisms of the manuscript.

I make one minor revision request, followed by a suggestion that is optional - not obligatory todo. The minor revision is with the writing. While most of the English usage is excellent, occasionally there are sentences such as: "Also, the microbiome lived in the colon being hugely important in the organisms' homeostasis. " that need to be edited. So, the required revision is simply a small amount of editing of the writing. As regards an optional suggestion - the authors may consider including a figure that summarizes the major colonic motility activities, their function, possibly pathology, etc, and how manometry reads the contractile movements. That is simply a suggestion, it is not a required revision.

SPECIFIC COMMENTS TO AUTHORS

It is a mere list of the available literature, which is dispersive and of little use. The usefulness of such revision articles is scarce without the description of clinical cases and without the explanation of the path that led to the resolution of the problems that

the clinical application of HRCM. And further, they described the limitations, future directions, and potential usefulness of HRCM in the evaluation of clinical treatment effects. Overall, the study is well designed and it should be published in the journal.
