

**PEER-REVIEW REPORT**

**Name of journal:** World Journal of Clinical Cases

**Manuscript NO:** 48249

**Title:** Characteristics of multiple nodules in a patient with pulmonary Langerhans cell histiocytosis

**Reviewer’s code:** 00608223

**Reviewer’s country:** United Kingdom

**Science editor:** Fang-Fang Ji

**Reviewer accepted review:** 2019-04-23 15:38

**Reviewer performed review:** 2019-04-23 15:50

**Review time:** 1 Hour

**SPECIFIC COMMENTS TO AUTHORS**

This case report has conducted a detailed analysis of nodule patterns in LCH and performed a thorough literature review about the disease and its radiological patterns. the details of the case are clear and presented in a logical order with no major omissions.

The figures support the case well and are clear. One minor modification which might improve the manuscript could be to consider if there should be a radiological criteria or score to grade severity of LCH; in the era of quantitative CT I wonder if this is something which could be done automatically eg nodule count, ratio cystic to non-cystic. The authors might want to allude to any prior research on this topic or suggest research designs that might be able to propose something like this.
