SPECIFIC COMMENTS TO AUTHORS

Authors have presented a case of Left colonic metastasis from primary hepatocellular carcinoma. The case is well written. I will suggest more through review of previous cases of GI or colon involvement in the discussion section.

SPECIFIC COMMENTS TO AUTHORS

This case is quite interesting as it describes a very rare event, the case is very well presented and the figures are clear. I have 2 queries to the authors: 1- How was the hepatic focal lesion managed? 2- What was the histological findings of the hepatic focal lesion? was it similar to the colonic lesion?

SPECIFIC COMMENTS TO AUTHORS

The manuscript `Left colonic metastasis from primary hepatocellular carcinoma : a rare event` by Fulvio Tagliabue is very interesting contribution presenting unusual case of left sided colon metastasis of HCC. Adding some essential clinical data would increase quality and benefits for the readers. Thus, anatomical site of metastasis is rare but not

unique. Location of organs in abdominal cavity matters. Thus, even sigmoid in the case of dolichosigma can have contact with liver lesion. How lesion was depicted on imaging, ultrasound? Doppler of portal, mesenteric blood flow etc. - vessel architecture, namely portal system, pressure gradients, splenomegaly? US of neovasularization? Contact of colon mts with hepatic HCC lesion and portal blood flow can suppose routes of venous (retrograde) or contact transperitoneal transfer. Any imoportant data from history for stratification patients? Viral hepatitis ? What new we can learn from the case? Can some early markers be caught analyzing the case? How it can modify existing protocol?
