作者: I Ahmad - 2015 - 被引用次数: 5 - 相关文章

When a urothelial specific Cre recombinase (UPII-Cre) is added, exon 3 is deleted, stopping  $\beta$ -catenin from being targeted for degradation, allowing accumulation in the urothelial cells and thus activating the Wnt signalling in a bladder specific manner.

Abstract · The role of WNT signalling ... · Modelling mutations of the ...

WNT/β-catenin signaling in urothelial carcinoma of bladder

Garg M *et al.* WNT/β-catenin in urothelial cancer

Minal Garg, Niharika Maurya

Abstract

Urothelial carcinoma of bladder is the second most prevalent genitourinary disease. It is a highly heterogeneous disease as it represents a spectrum of neoplasms, including non muscle invasive bladder cancer (NMIBC), muscle invasive bladder cancer (MIBC),

While the importance of **WNT/  $\beta$  -catenin signalling** is well established in many human **carcinomas**, its role in transitional cell **bladder carcinoma** (TCC) is unclear. **WNT/  $\beta$  -catenin signalling** is implicated in **urothelial** development. Expression of Wnt2b in mesenchymal renal cells induces ureter branching in the murine foetus (Lin et al, 2001).

E-cadherin involved in inactivation of WNT/ $\beta$ -catenin ...

### The prognostic significance of androgen receptor and $\beta$ ...

S Elzamy 저술 - 2018 - [관련 학술자료](#)

Androgen receptor (AR) activation plays an important role in the promotion and progression of **urothelial** tumorigenesis. Also, dysregulation of the **Wnt/ $\beta$ -catenin signaling pathway** has also been linked to **bladder cancer** growth. However, cross talk between the two pathways in remains unclear in **bladder cancer**.
