SPECIFIC COMMENTS TO AUTHORS

1. The paper offers a simple regimen that is safer, economical and more effective than the other regimens available in diabetes care. 2. The quality of the paper is acceptable and informative. 3. This is not an empirical or data-based research paper. However, it is highly readable and useful for improving diabetes care.

SPECIFIC COMMENTS TO AUTHORS

This article presents a simple method of managing diabetes in the perioperative period using an insulin infusion mixed in 5% dextrose in saline and adjusting as needed based on blood glucose (to maintain BG between 140 and 180). The article presents a reasonable method of titrating the insulin infusion but there is some confusion because

the target BG is 140-180, yet the correction for high blood glucose starts at 200 mg/dl. What would the treating physician do if BG is between 180 and 200? The authors should clarify this in the table. They also need to say "every 4 hours" instead of "every fourth hour". The authors also state that only two simple regimens are known to them, but should add "Perioperative management of diabetes" by JB Marks (Perioperative management of diabetes. PMID:12537172) to their references and the body of the article.
