## Pityriasis rosea-like cutaneous eruption as the presenting ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4619165>

Sep 30, 2015 · In conclusion, the presentation of Hodgkin lymphoma as a pityriasis rosea-like cutaneous eruption is rare and clinicians should be aware of this presentation. In this paper we review the non-specific cutaneous manifestations of Hodgkin lymphoma in an effort to raise awareness of the diversity of early cutaneous signs of Hodgkin lymphoma.

Cutaneous involvement by precursor T-cell lymphoblastic leukemia/lymphoma (T-ALL/LBL) is rare, and almost all cases are seen in association with bone marrow, blood, and/or lymph node involvement. Presentation with isolated skin involvement is very rare. Literature review revealed only one case report of primary cutaneous T-cell LBL.
