Laparoscopic surgery of ovarian tumors in children: Report of 4 cases and literature review Article in Scientific research and essays 5(21) · November 2010 with 5 Reads Cite this publication

[PDF] MALIGNANT OVARIAN STEROID CELL TUMOR CAUSING ...

<https://journals.aace.com/doi/pdf/10.4158/EP161685.CR>

Objective: To report a rare case of malignant ovarian steroid cell tumor with androgen excess.

Methods: We describe the clinical presentation and management of a malignant ovarian steroid tumor with severe hyperandrogenism in a postmenopausal woman. Results: An 83-year-old patient had a 6-year history of features of androgen excess.

A Case of a Giant Ovarian Mass in a Teenager: Case Report ...

www.fortunejournals.com/articles/pa-case-of-a-giant-ovarian-mass-in-a-teenager-case...

Ovarian tumors in children are uncommon, whether benign or malignant. The diagnosis must be considered, however, when there is unexplained pelvic pain. A palpable mass further raises suspicion and warrants prompt pelvic ultrasound. On occasion, precocious puberty and hirsutism will assist in the clinical evaluation. Surgery is the primary treatment for all ovarian tumors.

Robotic-assisted surgery for pediatric choledochal cyst ...

<https://www.wjgnet.com/2307-8960/full/v6/i7/143.htm>

Then systematic literature review was done to discuss the methods of intestine surgery and intestinal anastomosis, the use of 3 rd robotic arm, the surgical safety and advantages comparing open and laparoscopic surgery. We systematically reviewed choledochocystectomy for children performed by robotic surgery.

Juvenile Granulosa Cell Ovarian Tumor: A Case Report and ...

INTRODUCTION

Ovarian tumors are common gynecological diseases in children, and the most commonly seen ovarian tumors are germ cell tumors^[1]. Ovarian mature cystic teratomas, also known as dermoid cysts, are the most common germ cell tumor, and they are also the most common benign tumors of the ovary^[2]. Malignant germ cell tumors are relatively rare, but these malignant tumors usually have a high degree of malignancy. The proportion of malignancy is negatively associated with the age of the child (younger patients often have a greater likelihood of having malignant tumors)^[3].

With the rapid development of minimally invasive surgery in recent years, robotic surgery systems have been widely used in many surgical procedures in adults^[4-8]. However, due to the large age differences between pediatric patients, robotic surgery for children remains in the exploratory stage.

Robotic Debulking Surgery in Advanced Ovarian Cancer ...

https://www.researchgate.net/publication/323451659_Robotic_Debulking_Surgery_in...

Objectives: The purpose of this study was to report on the safety and feasibility of robotic-assisted systematic lymph node staging in the management of early-stage ovarian cancer.

[PDF] Port site metastasis after robotic-assisted laparoscopic ...

https://www.physio-pedia.com/images/6/65/Port_site_metastasis_after_robotic-assisted...

According to recent studies of gynecological malignancies, the reported incidence is low and comparable to the results of conventional laparoscopic surgery. Here, we report the case of a patient who suffered port site metastasis after robotic-assisted laparoscopic hysterectomy for stage IB1 uterine cervical cancer.
