<https://www.sciencedirect.com/science/article/pii/S2210261219300586>

Introduction. **Gastric** cancer with features of a **submucosal** tumor (GCSMT) is rare, and the preoperative diagnosis is very difficult. We present a **case** of GCSMT diagnosed by endoscopic ultrasound-guided fine needle aspiration (EUS-FNA) and boring biopsy (deeper biopsy), successfully treated with distal gastrectomy and lymph node dissection.
