Eosinophilic cholangitis: A case report of diagnostically challenging eosinophilic infiltrative biliary obstruction

Amar Dodda, Karen Matsukuma, Shiro Urayama

Abstract:

BACKGROUND

Evaluation of biliary strictures primarily focuses on ruling out malignancy in older age groups. With endoscopic tools such as endoscopic ultrasound (EUS) and cholangioscopy, improved biliary visualization has enhanced the investigation of intraluminal biliary lesions and provided modalities for targeted biopsies. Benign biliary strictures, however, may pose a diagnostic dilemma.

CASE SUMMARY

A 71-year-old female with past medical history of hypothyroidism presenting for abnormal biliary imaging. Patient's previous evaluation was concerning for common bile
