Abstract

BACKGROUND

Abnormal liver chemistry is a common problem in human immunodeficiency virus (HIV)-infected patients. Common causes of abnormal liver enzymes in this population include viral hepatitis B/C or opportunistic infection, drug toxicity, and neoplasm. Autoimmune hepatitis is a rare cause of hepatitis in HIV-infected individuals;

Discussion

F

Autoimmune Hepatitis (AIH) is a rare disease that is caused by circulating antibodies that cause inflammation and hepatocellular injury. Diagnosis is made through abnormal liver enzymes, detection of circulating autoantibodies, liver biopsy, and the exclusion of other causes of hepatotoxicity including infections and drug-induced liver damage. The International Autoimmune Hepatitis Group developed the original diagnostic criteria in 1999 which incorporated liver histopathology, serum studies...

Jun 25, 2011 · Our review of the literature revealed 12 cases of autoimmune hepatitis in patients with HIV infection [2-8]. Three had co-infections with hepatitis C virus and were receiving interferon therapy [6 - 8] and six more had AIH before starting HAART and one pediatric patient's data were missing.

Jun 25, 2011 · The emergence of hepatic injury in patients with human immunodeficiency virus infection during highly active therapy presents a diagnostic dilemma. It may represent treatment side effects or autoimmune disorders, such as autoimmune hepatitis, emerging during immune restoration. We present the case of a 42-year-old African-American woman with human immunodeficiency virus infection who ...
