

Comment 1: Methods and results in abstract are poorly described, please improve the section according the journal author's guideline.

We added more information about our methods and results to the abstract (lines 52-58)

Comment 2: The authors should improve the Methods paragraph, who did investigate the databases? Who did assess the articles quality? The screening of the articles is not sufficiently clear to the reader.

More detail was added to the first and last paragraphs of the Methods section (lines 96-97 and 116-117)

Comment 3: In Results should be reported the limits of the included articles.

We expanded the Quality Assessment sub-section of the paper (lines 130-133)

Comment 4: The articles criticism and comments should be reported in the discussion, as well as, authors recommendations to orthopedic surgeons.

We added our recommendation against universal dental screening (lines 259-260)
