SPECIFIC COMMENTS TO AUTHORS

Article title "Observation of the changes of serum inflammatory factors and miR-145 expression in patients with osteoarthritis before and after treatment and its clinical value" deal an important issue of osteoarthritis. This clinical study aimed to observe the

changes and clinical value of serum inflammatory factors and miR-145 expression in patients with osteoarthritis before and after treatment. The authors concluded that miR-145 and inflammatory factors have certain diagnostic value in osteoarthritis, and it is expected to become a potential indicator for the diagnosis and evaluation of osteoarthritis in the future. This is an interesting and innovative study. Methods are adequate and the results are well presented. Only minor revision is needed to improve the manuscript. In the discussion section missing adequate references. Please provide as follow: "Many clinical workers use K-L grading to evaluate the therapeutic effect of patients with osteoarthritis, but the K-L grading depends on imaging, the effect of radiation on the human body and the medical expenses are high, and it takes a long time" Please quote the following recent and interesting paper: Expression of β -defensin-4 in "an in vivo and ex vivo model" of human osteoarthritic knee meniscus. *Knee Surg Sports Traumatol Arthrosc.* 2012 Feb;20(2):216-22. "The pathogenesis of osteoarthritis is complex, especially primary osteoarthritis" Please quote the following recent and interesting paper: β -Defensin-4 (HBD-4) is expressed in chondrocytes derived from normal and osteoarthritic cartilage encapsulated in PEGDA scaffold. *Acta Histochem.* 2012 Dec;114(8):805-12. "At present, the cause of osteoarthritis is not clear, it may be related to the age span of our subjects and the long course of osteoarthritis" Please quote the following recent and interesting paper: Asymmetrical seeding of MSCs into fibrin-poly(ester-urethane) scaffolds and its effect on mechanically induced chondrogenesis. *J Tissue Eng Regen Med.* 2017 Oct;11(10):2912-2921. "miR-145 knockout can also inhibit the proliferation / differentiation of osteoclasts, induce osteoclast apoptosis" Please quote the following recent and interesting paper: Chondrocyte-like apoptosis in temporomandibular joint disc internal derangement as a repair-limiting mechanism. An in vivo study. *Histol Histopathol.* 2009 Mar;24(3):293-8. In the conclusion section please specify better the clinical relevance of your work.

SPECIFIC COMMENTS TO AUTHORS

FROM UR STUDY IT IS NOT CLEAR IF YOU EXCLUDED RHEUMATOID ARTHRITIS OR OTHER INFLAMMATORY ARTHRITIS AS IT CAN RESULT IN FALSE POSITIVE TESTS?
