This is an interesting case report of using autologous platelet-rich-fibrin-induced revascularization in two cases. Please orient the figure 2E, G, H as that of figure 2F; similarly, for figure 3A, B and figure 4B,C,D.

The authors reported two cases, in which the regenerate endodontic treatment (RET) of immature permanent teeth was performed with platelet-rich fibrin (PRF). This case reported was described precisely and seems to be interesting. As a reviewer, I have two requests and questions. #1 The authors used "the present study" frequently, however, this is the two case reports. The authors should revise them. #2 The authors used "subject" in the present manuscript. The authors should change it to a "patient".
