Levofloxacin-induced rhabdomyolysis: a case report

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4997698>

Aug 24, 2016 · The earliest **report** of quinolone-induced rhabdomyolysis was observed by Blain et al. in 1996 . Levofloxacin-induced rhabdomyolysis was first reported in 2000 and thus far only a few cases have been reported [4–7]. Previous reports that rhabdomyolysis occurs within 6 days of initiation of levofloxacin remained true in our **case** also.

Abstract

BACKGROUND

Primary hypoparathyroidism is rarely seen in the clinic, and it can be combined with rhabdomyolysis. There were few reports about this phenomenon. Therefore, it is significant to explore the etiology which is conducive to early diagnosis, timely treatment and preventing the recurrence.
