The manuscript is a review of the main web sites concerning the revision total hip arthroplasty (THA) aimed to assess the quality and readability of the internet information. Of the 80 websites initially included, 46 selected and assessed according to the category, Health On the Net Foundation, DISCERN, Vancouver Revision Arthroplasty Information scores. The majority of websites (52%) were academic with a post-graduate reading level. Twenty-eight percent of websites had a 'good' DISCERN score and only 28% had a 'good' score with the novel VRAI scoring system. The authors concluded that the information on the internet relating to revision THA is of low quality, much lower than the quality of information on primary THA. Comment 1: The Introduction is not sufficiently developed. More information about the patient web use should be included Comment 2: The authors reported that only 28% of the websites had a good score. Are they the most visited? Are they in the first places of the first page? Comment 3: No footprint were reported in figures and tables. Please add.
