Sep 14, 2006 · A metastatic malignancy of the umbilicus is commonly termed **Sister Mary Joseph nodule** (SMJN). It is a rare occurrence but may represent the first sign of a visceral malignancy and therefore should prompt a thorough search for the primary tumor. Typically, the most common origin of an umbilical metastasis is an adenocarcinoma from a gastrointestinal or gynecologic primary ...

Sister Mary Joseph's nodule in endometrial carcinoma: A case report

Li Y *et al.* Sister Mary Joseph's nodule in endometrial carcinoma

Yang Li, Peng Guo, Bin Wang, Yi-Tao Jia

Abstract

BACKGROUND

Sister Mary Joseph's nodule (SMJN) is rare and may occur independently or simultaneously with malignant tumors in the abdominal cavity. It has a poor prognosis. Endometrial carcinoma is the most common malignant tumor in the upper segment of the female reproductive tract; however, it rarely occurs with SMJN. We here report a case of endometrial carcinoma with SMJN.
