## Tumoral calcinosis (Teutschlander disease) in a dialysis ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2813132>

Tumoral calcinosis is an uncommon and severe complication of hemodialysis therapy. 1 – 3 The genesis of tumoral calcification has been attributed to high calcium and phosphorus products and/or advanced secondary hyperparathyroidism after long-term dialysis. The patient presented with huge, tumor-like, subcutaneous deposits (tumoral calcinosis) and calciphylaxis (uremic arteriopathy), ...

## Tumoral calcinosis: Diffuse multifocal form in ...

<https://www.sciencedirect.com/science/article/pii/S1877056817301494>

Case report Tumoral calcinosis: Diffuse multifocal form in hemodialysis patients. Two case reports. Such presentations in a dialyzed patient should suggest tumoral calcinosis, which is a rare complication of dialysis, often diagnosed wrongly or late. It is often associated with calcium phosphate balance disorder,...
