This is an interesting case about NHL involving endocrine organs and multiple extranodal involvements. However there are important problems in the presentation of the case: 1-Case must be presented more fluently. Clinical discussions and treatment steps must be excluded and laboratory test must be presented clearly 2-Treatment of the patient has not been presented and treatment detail must be written clearly 3-All the tables and figures must be mentioned at the text 4-Patient has multiple extranodal involvements and has high risk for CNS relapse. This point must be discussed and CNS-IPI must be calculated and presented 5-Discussion must be more clear and detailed 6-English must be reviewed and corrected

This case report seems to be interesting. As a reviewer, I have two requests. #1 The abstract is too lengthy. Thus, the authors should shorten it within 250 words. #2 The authors had better provide figures of biopsy of lymph nodes.
