Subcutaneous metastasis arising from gastric cancer: A ...

<https://www.ncbi.nlm.nih.gov/pubmed/28413658>

Subcutaneous metastasis from gastric cancer is a rare manifestation, with a reported incidence of 0.8-1.0%. Cutaneous metastasis of cancer generally appears late in the course of the disease. Surgical resection of metastatic skin tumors is occasionally undertaken as palliative treatment to improve the patient's quality of life by controlling severe symptoms, including pain and hemorrhage.
