

PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 51186

Title: The end-stage liver disease score and future liver remnant volume predict post-hepatectomy liver failure in hepatocellular carcinoma

Reviewer's code: 01438831

Position: Editorial Board

Academic degree: MD, PhD

Professional title: Chief Doctor, Surgeon

Reviewer's country: Japan

Author's country: China

Reviewer chosen by: Artificial Intelligence Technique

Reviewer accepted review: 2019-09-03 08:52

Reviewer performed review: 2019-09-10 05:04

Review time: 6 Days and 20 Hours

This manuscript is well written and the study is informative. sFLR volume combined with MELD score would be a reliable and effective predictor for PHLF. The author showed in the results that the platelet count and albumin level were also independent risk factors in multivariate logistic regression analysis. The platelet count and albumin level are very easily measured in any hospital. Then, adding these two factors might make predictor more reliable and effective?
