Laparoscopic gastric resection with natural orifice ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4105667>

Mar 31, 2014 - Abstract. Although **natural orifice specimen extraction** is now relatively widely performed, there have been no reports on **gastric resection with specimen extraction** through the transgastric route for **peptic ulcer disease**. A hybrid technique of the **laparoscopic** and **endoscopic** approach is presented in the case of a 58-year old male patient.

Robotic gastrectomy with transvaginal specimen extraction ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4679766>

Dec 21, 2015 - Core tip: It is widely recognized that the natural orifice specimen extraction (NOSE) could reduce **postoperative pain**, length of stay, and morbidity. Although NOSE has been performed in different institutions, there has not been any report of **transvaginal specimen extraction** following full **robot-sewn gastrectomy** for **female gastric cancer**.

Total laparoscopic subtotal gastrectomy with transvaginal ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4643334>

Transvaginal specimen extraction after laparoscopic gastric resection for advanced gastric cancer is a feasible procedure. It is offered to selected patients and of course only to female patients. **Natural orifice surgery** may provide faster recovery and decrease the wound related complications which may cause a delay on **postoperative adjuvant chemo-radio therapies**.
