SPECIFIC COMMENTS TO AUTHORS

The manuscript is interesting and of the hypothesis is acceptable and well researched.

However there are some issues that could improve the presentation. There is redundancy in the listing of other exophthalmic causes. Only a small number were investigated but I believe that was because the presentation was neuro-orthopedic and the exophthalmos had been previously reviewed and unsuccessfully treated. This comment could be added to the discussion. Some discussion should also be added to the rapidity of the exophthalmic regression. Muscle loss is not expected to be clinically noted in 1 day. Finally, there are some English language errors--the "an" instead of "a" in the case summary; an absent "the" in the history of past illness and the awkward "except" in the abstract conclusion.
