Apr 10, 2019 · Although the standard of care for **resectable pancreatic ductal adenocarcinoma** remains **surgery** followed by **adjuvant chemotherapy**, approximately 50% of **patients** are unable to **receive adjuvant treatment** due to **postoperative complications**.

Neoadjuvant Therapy in Pancreatic Adenocarcinoma: A Meta ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3164966>

Neoadjuvant treatment has proven beneficial for many GI malignancies, but no phase III trials have been completed examining this approach in **pancreatic** cancer. This meta-analysis examines the best available phase II trials using **neoadjuvant treatment for resectable** and borderline/unresectable **pancreatic adenocarcinoma**.

Neoadjuvant therapy for resectable pancreatic ductal adenocarcinoma: The need for patient-centered research

Cloyd JM *et al.* Patient-centered neoadjuvant therapy

Jordan M Cloyd, Allan Tsung, John Hays, Celia E Wills, John FP Bridges

Abstract

Pancreatic ductal adenocarcinoma is an aggressive cancer with high recurrence rates following surgical resection. While adjuvant chemotherapy improves survival, a significant proportion of patients are unable to initiate or complete all intended therapy following pancreatectomy due to postoperative complications or poor performance status. The administration of chemotherapy prior to surgical resection is an alternative strategy that ensures its early and near universal delivery as well as improves margin-

Adjuvant and neoadjuvant therapy for resectable pancreatic adenocarcinoma Resectable **pancreatic adenocarcinoma** presents the opportunity for cure of this highly lethal disease by allowing complete surgical removal. However, **cure rates** remain low. **Adjuvant therapy** following **surgical resection** is the standard of care.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3164966>

Of those patients with resectable pancreatic adenocarcinoma, 65.8% underwent curative resection. This finding is similar to the rate of resection reported in patients with resectable disease who did not receive neoadjuvant treatment. Not surprisingly, 85.1% of the patients in this group had RO resections ...
