## Metastatic renal cell carcinoma without evidence of a ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4059817>

Although metastases are common in patients with renal cell carcinoma (rcc), it is extremely rare for patients to present with metastatic rcc (m rcc) without evidence of a primary mass in the kidney. Two cases of m rcc with no detectable primary renal mass are reported here. Both patients had bilateral native kidneys in situ and no significant prior urologic history.

## Renal Cell Carcinoma With Retroperitoneal Lymph Nodes ...

<https://www.sciencedirect.com/science/article/pii/S0022534705635379>

A, 32-year-old male who presented with hematuria and nonspecific abdominal pain had small, central right renal cell carcinoma, bulky retroperitoneal adenopathy and no evidence of distant metastatic disease. B, microscopic foci (arrows) of clear cell carcinoma within lymph node surrounding renal pedicle. Reduced from  $\times 40$ .

## Renal cell carcinoma with retroperitoneal lymph nodes ...

<https://onlinelibrary.wiley.com/doi/full/10.1002/cncr.11422>

The disease-specific survival for patients with metastatic renal cell carcinoma with regional lymphadenopathy was equivalent regardless of the extent of lymph node disease. N1 indicates metastasis in a single lymph node and N2 indicates metastases in more than one lymph node.
