To Whom it May Concern

This is to certify that I, Dr. Silke Cameron, Department of Gastroenterology and Endocrinology, University Medical Center Göttingen, Germany, have – as a native-level English speaker - read and approved of the manuscript entitled “Differential gene expression of chemokines in KRAS and BRAF mutated and wild-type colorectal cell lines: Role of cytokines”.

I found the manuscript well structured, grammatically correct and with appropriate punctuation. I recommend this paper for publication in an international journal.
