## Traumatic brain injury with a machete penetrating the dura ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5022070>

Introduction. Traumatic Brain Injury (TBI) is a major cause of death and disability in our society, we present the first case report of non-missile penetrating (NMP) cranial trauma with a machete in Mexico, and our objective by presenting this case is to prove the usefulness of recently proposed algorithms in the treatment of NMP

## Transorbital penetrating brain injury by a wooden stick: A ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4849325>

Accidental penetrating brain injury through transorbital route is an unusual occurrence in emergency practice of civilian cases. At time, it could be potentially life threatening. We report an interesting case of transorbital penetrating brain injury with a wooden stick in a 44-year-old male epileptic patient.

## Transorbital Craniocerebral Occult Penetrating Injury with ...

<https://www.hindawi.com/journals/criopm/2012/742186> ▾

Transorbital intracranial penetrating injury is an uncommon mechanism of head injury. These injuries can be occult during the initial clinical presentation. Certain patients develop an intracranial cerebral infection. Herein, we report a 5-year-old child with an occult transorbital intracranial penetrating injury caused by a pen. A retained pen tip was found at the superior orbital roof and ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4849325>

Accidental penetrating brain injury through transorbital route is an unusual occurrence in emergency practice of civilian cases. At time, it could be potentially life threatening. We report an interesting case of transorbital penetrating brain injury with a wooden stick in a 44-year-old male epileptic patient.

## Management of Nonmissile Penetrating Brain Injuries: A ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3743592>

Apr 14, 2011 · Nonmissile penetrating intracranial injuries are uncommon events in modern times. Most reported cases describe trajectories through the orbit, skull base foramina, or areas of thin bone such as the temporal squama. Patients who survive such injuries and come to medical attention often require foreign body removal.
