The manuscript in title: Primary intestinal extranodal natural killer/T-cell lymphoma: A case report and literature review, is a good topic as it is a rare disease and the clinical presentation here was intermittent hematochezia, and usually presentation published before was abdominal pain (90.9%), accompanied frequently with fever and less commonly with intestinal perforation or B symptoms (reported in 55 cases (Bao-Hua Yu et al., 2016). please for (a) rephrase conclusion as it is too long, (b) separate figure 3 into 2 figures; one Pathological test results and the other follow-up PET-CT results
