## Chondrosarcoma of the maxilla: A case report and review of ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3830240>

We report a case of recurrent chondrosarcoma of the maxilla in a 29 yr old male patient. The lesion presented as a small diffuse swelling on the left maxillary anterior region which had progressed over a period of one year. On aspiration, a chondromyxoid matrix ...

## Dedifferentiated chondrosarcoma of the maxilla. Report of ...

<https://www.sciencedirect.com/science/article/pii/S2212555819300511>

Oct 03, 2019 - The presentation of dedifferentiated chondrosarcoma in the skull bones is extremely rare and to our knowledge only five cases of maxillary bone involvement have been reported to date [., ], including two cases of radiation-induced dedifferentiated chondrosarcoma of orbit and maxillary sinus ...

## Myxoid chondrosarcoma of maxilla: A rare case report ...

<https://www.sciencedirect.com/science/article/pii/S2212555815002628>

Myxoid chondrosarcomas are typically located in the limbs in older patients, and only rarely originate in the head and neck. We hereby report a case of myxoid chondrosarcoma involving the maxilla ...

Cited by: 1 Author: Hiralal Ash, Ajoy Kumar Shahi, Kabita Ch...

Publish Year: 2016

## [PDF] Chondrosarcoma of the Maxilla-Recurrent

[https://jkscience.org/archive/volume102/Case Report/chondrosarcoma.pdf](https://jkscience.org/archive/volume102/Case%20Report/chondrosarcoma.pdf)

chondrosarcoma of the maxilla. Case Report A 45-year-old man was admitted with a bony swelling on the right side of the hard palate. He was operated for chondrosarcoma of nasal cavity, by bilateral lateral rhinotomy approach 6 years back and his histopathological report was documented as well differentiated chondrosarcoma grade-I with all margins negative for the tumor.

## An extraskeletal chondrosarcoma of the maxilla: A case report

<https://www.sciencedirect.com/science/article/pii/S0278239195904018>

The two known case reports are extraskeletal myxoid chondrosarcomas that involved the maxillary sinus<sup>6</sup> and chin.<sup>7</sup> Because of the relative rarity of central cartilaginous tumors, and extreme rarity of extraskeletal tumors in the maxillofacial region, information demonstrating the relationship between histologic features, radiographic features, and other tumor parameters (eg, DNA studies<sup>8-9</sup>), and ...
