

**Reviewers reports:**

Reviewer 1 makes little suggestion. I have included a statement about our own anecdotal evidence.

Reviewer 2 points have been addressed with a comment about the timing of taking the medication and changing H pylori as described.

Reviewer 3 – additional description has been added to paragraph 1 and the whole point of the editorial is that there is no published evidence.

Reviewer 4 – the only problem is that I am not talking about non-ulcer dyspepsia so I don't think the quoted reference helps.
