## **SPECIFIC COMMENTS TO AUTHORS**

In the case report entitled “Metabolic and genetic assessments interpret an unexplained aggressive pulmonary hypertension induce by methylmalonic acidemia”, the authors reported an uncommon case who presented as severe pulmonary hypertension as the first manifestation without significant cardiovascular malformation, and finally diagnosed as methylmalonic aciduria after metabolic and genomic assessment. The observation is insightful, and could be helpful in clinic study. 1. Full name with its abbreviation (such as CT, MRI, ET-1...etc) should be firstly appeared in the paper. 2. The paper presents some typing errors and an extensive editing of English language is recommended.
