SPECIFIC COMMENTS TO AUTHORS

Piazzolla et al present an interesting, well-documented and well-written case of a novel nonsense gene variant involved in the pathogenesis of recurrent cholestasis. It is appropriate for publication as written. Such reports are needed as more and more patients with liver disease undergo genetic sequencing and physicians look to interpret the results.

We thank the referee for the positive evaluation of our paper.

SPECIFIC COMMENTS TO AUTHORS

1. Provide your detailed important laboratory investigations in table, and the therapeutic process in trend chart. 2. Where is your literature review?

We thank the referee for the constructive suggestions aimed to improve our paper.

Answer 1: A figure containing the course of most significant laboratory tests and a trend chart with the therapeutic process have been enclosed in revised manuscript.

Answer 2: Our literature review has been emphasized and highlighted in revised manuscript. In detail, it was divided into two sections: "General overview" and "Our case in the context of recent advances about genetic scenario".
