SPECIFIC COMMENTS TO AUTHORS

In this study, the authors reported an interesting case of a pregnant female for the first time had no abnormalities during the pregnancy. Venous thromboembolism is one of the most common critical illnesses in obstetrics. Thrombophilia is an important risk factor for venous thromboembolism in pregnant women. This case report is well written, and discussed with updated references. Comments: 1. Title: suggest to change to "Severe venous thromboembolism in the puerperal period caused by thrombosis: a case report and review of the literature". 2. The abstract should be re-written according to the journal's guideline. 3. Case report. This section is informative, however, the structure is not according to the journal's guideline. Please re-structure it. The diagnosis of the case is reasonable, and the treatment is effective. 4. Discussion. The case is discussed well. 5. Tables and figure are interesting. 6. Some minor language polishing should be revised.

SPECIFIC COMMENTS TO AUTHORS

The authors should put in the abstract something about the reported case, as it seems that only a review of the literature was made. "Cefuroxime sodium combined with metronidazole" are antibiotic and non-inflammatory treatments. Finally, the literature review in the discussion should be improved by including more articles published from 2014, such as: doi: 10.1097 / GRF.0000000000000354, 10.1136 / bmj.j4452, 10.1007 / s12325-019-01124-z , 10.1002 / 14651858.CD001689.pub3, 10.1002/rth2.12243, 10.1177/1745505716653702, 10.1016/j.htct.2019.03.003, 10.1097/MD.00000000000016883 and 10.1097/MBC.0000000000000219.
