Hypersensitivity reactions to modern antiplatelet and ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4479548>

Mar 14, 2015 - The present article deals with hypersensitivity reactions – elicited by modern anticoagulant or antiplatelet drugs. The already well-known hypersensitivity reactions to heparins as well as the adverse drug reactions (ADR) to coumarins and ASA reported in numerous publications will not be discussed here in detail; the reader is instead referred to recently published overview articles ...

A case of two adverse reactions | Postgraduate Medical Journal

<https://pmj.bmj.com/content/80/946/484> ▾

Aug 01, 2004 - Low molecular weight heparins are now widely prescribed in the treatment of thromboembolic disease and acute coronary syndromes. Anaphylaxis is a recognised but rare potentially life threatening side effect of heparin. Common clinical features of anaphylaxis are cardiovascular collapse, bronchospasm, cutaneous symptoms, angioedema, generalised oedema, or gastrointestinal ...

May 31, 2016 - Heparin-induced thrombocytopenia is a profoundly dangerous, potentially lethal, immunologically mediated adverse drug reaction to unfractionated heparin or, less commonly, to low-molecular weight heparin. In this comprehensive review, the authors highlight heparin-induced thrombocytopenia's risk factors, clinical presentation, pathophysiology, diagnostic principles, and ...

CASE REPORT Cerebral venous thrombosis due to cryptogenic organising pneumopathy with antiphospholipid syndrome worsened by heparin-induced thrombocytopenia J Hsieh,1 | Kuzmanovic,1 M | Vargas,2 | Momjian-Mayor1 1Department of Neurology, Geneva University Hospital, Geneva, Switzerland 2Department of Neuroradiology, Geneva University Hospital

Heparin

Heparin-induced thrombocytopenia (HIT) is an anticoagulant-induced thrombotic syndrome (TTS) characterized by thrombocytopenia and thrombosis. It is an abnormal antibody that develops new blood clots and can be confirmed by a positive HIT-2 assay.
