Manuscript NO: 52937 Title: Case report of anomalous retinal artery associated with branch retinal artery occlusion and neovascular glaucoma
Manuscript Type: Case Report by: Wan-Ju Yang, Yan-Ning Yang, Ming-Gao Cai and Yi-Qiao Xing The authors report an unusual case of anomalous retinal artery combined with retinal artery occlusion. An abnormal artery that passes through and supplies blood to the macular area can negatively impact visual acuity when complicated with branch retinal artery occlusion (BRAO). The case I well presented and described the included images aare of good quality and a good education of the underlying pathomechanism.
