## Assessment of the current capacity of intensive care units ...

<https://www.sciencedirect.com/science/article/pii/S0883944119310597>

The non-ventilated beds were largely used for High-dependence **Unit (HDU) care** since there were no separate HDUs in the hospitals. According to the European Society of **Intensive Care Medicine (ESICM)** and Society of **Critical Care Medicine (SCCM)** guidelines, ICUs should have at least 8–12 beds and 225 square feet of floor space per bed [17, 18].
