**Traditional investigations and managements for recurrent hemarthrosis after total knee arthroplasty: A case report**

Geng X *et al.* recurrent hemarthrosis after total knee arthroplasty

Xiao Geng, Yang Li, Xuan He, Hua Tian

## Abstract

### BACKGROUND

Recurrent hemarthrosis is a relatively rare complication of total knee

Jan 14, 2010 · This **report** describes a **case** of spontaneous **recurrent** hemarthrosis of the **knee** that presented 4 weeks **after total knee arthroplasty**. Femoral arteriography showed a false aneurysm of a branch of the inferior lateral geniculate artery. Therapeutic embolization of the arterial branch was performed using three platinum coils with good clinical result and good **knee** joint function. ...

Spontaneous recurrent hemarthrosis of the knee is an unusual entity, with traditional surgical therapy associated with significant morbidity. Given et al reported three cases of geniculate artery embolization, with spherical embolic particles used in two patients and microcoils used in the other one. One patient had a recurrence at 6 months, and no complications were encountered.

## Total knee arthroplasty in hemophilia A - Arthroplasty Today

[https://www.arthroplastytoday.org/article/S2352-3441\(19\)30169-4/fulltext](https://www.arthroplastytoday.org/article/S2352-3441(19)30169-4/fulltext)

Therefore, orthopaedic adult reconstructive surgeons increasingly encounter hemophilic arthropathy in young adults and consider treating with total joint arthroplasty. In this report, the authors describe a patient with hemophilia A and severe knee osteoarthritis, who was subsequently treated with primary total knee arthroplasty.
