Current Research

Research Agenda

Previous Workst

Attention-deficit/hyperactivity disorder (ADHD) is a serious public health problem affecting a large number of children and adults. CDC conducts research to expand on what is known about ADHD. The information learned will improve knowledge about the factors that increase the risk for ADHD, as well as the causes, and best treatments, and will aid the development of resources to help people living with AD...

Young adults with ADHD were referred to GI specialist almost twice than those without it (OR=1.95, 95%CI 1.88-2.03). **In this largest cohort published so far, we showed that ADHD is associated with substantiated functional GI morbidity. Young adults with ADHD consume more GI-related medical services.**

Attention deficit hyperactivity disorder (ADHD) is a common mental **disorder** associated with factors that are likely to increase mortality, such as oppositional defiant **disorder** or conduct **disorder**, criminality, accidents, and substance misuse. However, whether ADHD itself is associated with increased mortality remains unknown.

Attention Deficit Hyperactivity Disorder

Medical condition

Attention-deficit/hyperactivity disorder (ADHD) is a brain disorder marked by an ongoing pattern of inattention and/or hyperactivity-impulsivity that interferes with functioning or development.

[NIH](#)

Symptoms

There are three categories of ADHD symptoms in addition to three types of the disorder. Symptoms are classified as:

- inattention: getting distracted easily, having poor concentration and organizational skills
- impulsivity: interrupting, taking risks...

[Read more on Healthline](#)

Causes

The cause of ADHD isn't known. Researchers say several things may lead to it, including:

- Heredity. ADHD tends to run in families.
- Chemical imbalance. Brain chemicals in people with ADHD may be out of balance.
- Brain changes. Areas of the brain that...
