RESULTS: The NSC grade correlated with **tumor size**, **preoperative CA19-9**, surgical margin, the degree of differentiation, the depth of invasion, **lymph node metastasis**, lymphatic invasion, vascular invasion, and perineural invasion. Multivariate analysis of overall survival showed that NSCs were an independent prognostic factor.

Some results are removed in response to a notice of local law requirement. For more information, please see [here](#).

## BMJ Case Reports recent issues

<https://casereports.bmj.com/rss/recent.xml>

We **report a case** of Behcet's disease in a 9-year-old boy from Greece, presenting with a history of recurrent ulceration of the oral cavity. Following inspection of the oral cavity, which revealed lesions on both the upper and lower labial mucosa, as well as a large ulcer on the apex of the tongue, the diagnosis of Behcet's disease was immediately suspected.
