SPECIFIC COMMENTS TO AUTHORS

This beautiful review explore the risk of developing venous thromboembolism (VTE) in patients with inflammatory bowel disease (IBD). The review cover different important topics with a general overview on morbidity, mortality, cost and mechanism of VTE genesis in IBD patients and a deep and accurate discussion of all the known and/or suspected risk factors of VTE, covering patient's related risk factors (ie age, pregnancy etc), IBD related risk factors (ie disease extent) and treatments (both medical and surgical). Finally the review focuses on thromboprophylaxis underlining that despite the high risk of VTE in IBD patients, thromboprophylaxis is prescribed only in a minority of IBD patients with high VTE risk with low adherence to guidelines. This review is very well written and exhaustively explore different aspect of VTE in IBD patients. I strongly recommend the publication of this manuscript.
